Projects:

TITLE-Detection of lung cancer from ct images using image processing **2023**

Tools & technologies- Matlab ,image processing techniques ,machiene learning algorithm.

Description-

- The methodology performs well in enhancing, segmenting and extracting features from CT images.
- Median filtering technique was effective in eliminating impulse noise from the images.
- Hence this proposed methodology helps in accurate and early stage detection of lung cancer.
- The project aimed to improve early diagnosis and increase the accuracy of identifying malignant modules.
- Integrated machiene learning models divides the cancer part into two types-which gives accurate results that the cancer is benign or malignant.

TITLE-Calculator

- Engineered a comprehensive arithmetic calculation tool utilizing Java, CSS, and JavaScript to enhance accuracy and efficiency in performing basic operations.

Certifications:

JAVA FULL STACK DEVELOPMENT certification by 360 digrii institute **2023**

- Learning the fundamentals of C, Java, sql, no-sql, html & css ,javascript and workshop on bootstrap.

Internship:

CCNA routing &switching protocols by cisco | **2020**

- Gained knowledge on switches and it types,routers and it types and different types of networks and IP addresses.

Strengths:

- Willingness to embrace change and learn new skills.
- Capacity to understand and relate to the emotions of others.
- Strong analytical and problem solving skills.
- Ability to work collaboratively with diverse teams.
